The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/576,125	Applicant(s) FUJIYASU ET AL.	
	Examiner leszek b. kiliman	Art Unit 1794	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP'441 in view of Buess'239 and what is disclosed in the applicants specification.

The applied JP'441 reference teaches that it is known in the art to make and use a complex black oxide particle. The JP'441 does not specifically teach CoCuMn particle. The applied Buess'239 disclose that it is known to make and use complex particles of CoCuMn . See column 2, lines 23-67, column 4, lines 1-3. Also, the specification discloses that it is known in the art to make and use complex black oxide particles that include claimed elements.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify JP'441 complex black oxide particle composition to include Cu instead of Fe, since such would increase number of available complex particles for use. Also, it would have been obvious to optimize properties and process steps to obtain such particles since it has been held that discovering an optimum value of a result effective variable involves only routine

skill in the art. The use of hydroxides and different process temperatures have been shown in the Buess'239 reference.
